MTN Broadband - FAQ

Q. How do I know if my MTN Broadband router is on 4G or 3G?

A. **Blue** network signal light on your Broadband router indicates your Broadband is on 4G, while a **green** network signal light indicates 3G. Note that the switch between 4G and 3G on your Broadband router is automatic depending on the available network in your location.

Q. How should I get the best use of my MTN Broadband in-built battery?

A. You are advised to ensure the in-built battery is fully charged before the 1st use

Q. How do I make other devices (phones/tablets/laptops) discover my MTN Broadband for a wireless (WiFi) connection?

A. Simply press the WPS button at the top of your Broadband router to enable other devices discover your Broadband for a wireless connection via WiFi.

Q. How do I know if I am in a 5G Coverage Area?

A. Simply download MyMTNApp to check or click on link and search for your location <https://coverage.mtn.ng/>.

Q. Why Is my data depleting very Fast?

A. Your data is depleted based on a variety of factors from your device type to network mode selected, to the volume of your internet usage.

Q. What causes Data Consumption/Usage/Depletion?

A. Your data is used whenever your phone/Laptop/TV etc. connects to the internet. The following activities are the most common uses that reduce your data:

Sending and receiving emails,

- Downloading and uploading files (pictures, documents, videos, etc.) – the larger the file, the more the data consumption,
- Browsing the internet – the more pictures, videos or graphics on the websites visited, the more data is used,
- Instant Messaging – like WhatsApp, Facebook Messenger, Snapchat, etc.
- Streaming music/ videos on YouTube, Hulu, Netflix and other channels,
- Games – games use a lot more data than most people imagine, due to the intense graphics and algorithms that power them,
- Social media applications such as Facebook, WhatsApp, Twitter,
- Instagram, etc.
- Video-chatting and conferencing applications like Zoom, Skype, WhatsApp Video, etc.
- Automatic update of application installed on the device or device Operating system (OS)
- Automatic file upload to the cloud (iCloud, Google Photos, Microsoft Cloud, Amazon etc.)
- Using devices as Hotspots for other digital devices (TV, Games etc.)
